PROFILE

Cyber security engineer at Randori, an IBM company, working on attack surface management within the IBM QRadar suite. I build the Python automation, CLI tooling and MCP based agent workflows the detection team runs on, write the fingerprinting rules that identify exposed software and services, and correlate findings against CVE and CPE data so customers can prioritise remediation. Outside work I run VNTA Group, a portfolio of premium ventures.

Open to cyber security, security automation and AI tooling roles. Based in Dublin.

SKILLS

Security	Attack surface management, detection engineering, threat analysis, vulnerability management and risk mitigation, CVE and CPE correlation, service fingerprinting, security posture assessment
Automation and AI	Python, CLI tooling, security automation, MCP and agentic systems, FastMCP, scripting and data collection pipelines
Data	Data analysis, statistics, SQL, regular expressions
Platforms	IBM Randori, IBM QRadar suite, Splunk, Git and GitHub, Jekyll, SvelteKit

EXPERIENCE

Security Engineer, Randori

Randori, an IBM company · Ireland, Hybrid · Jan 2024 to present

- Build Python CLI tooling and MCP based agent workflows that streamline detection and targeting for the team, plus scripts that automate data collection.
- Develop and ship detection rules with the wider Randori team, improving security posture across the customer base.
- Write regular expression rules that fingerprint software, services and versions, then correlate findings against known vulnerabilities using CPE mappings and scoring frameworks to support vulnerability risk mitigation.
- Identify attack vectors such as exposed login fields, directory listings and default installations, and recommend mitigations to reduce customer exposure.
- Partner with customer success and sales engineering on technical troubleshooting.
- Volunteer on the Dublin Lab Social and Technical Events Board.

Cybersecurity Intern

Dell Technologies · Limerick, Remote · Feb 2022 to Aug 2022

- Six month placement in Dell's Security and Resiliency Organization: security monitoring and alert triage, incident response support, vulnerability scanning and patch prioritisation.
- Wrote a LinkedIn article and video on the internship, with eight practical tips for incoming interns.

Database Engineering Intern

Brown Thomas Arnotts · Dublin · Summer 2021

- Built and maintained SQL databases for retail operations and reporting, including data integrity, backup and access control processes.

ENTREPRENEURSHIP

Founder

VNTA Group, Vantanéant International Ltd · Dublin · Nov 2024 to present

Parent company behind Vendr, Éirvox and Maison Seul. I lead strategy, brand and operations across the group, building shared infrastructure so each company scales on common foundations.

- **Vendr** (2026): premium, fully managed vending for modern workplaces. Strategy, partnerships and rollout across Vendr Pass and Vendr Select.
- **Éirvox** (2025): a curated marketplace for premium goods in Ireland. Product, brand and engineering direction, from identity to platform architecture.

PROJECTS

SpaceXplorer

Final Year Project, National College of Ireland · spacexplorer.info · 2022 to 2023

Explored the SpaceX and NASA APOD APIs with data science and machine learning, analysing 4,630 orbital launch attempts across 62 operators, 370 rockets and 158 launch sites, and published the findings and live launch statistics as an open source site.

EDUCATION AND CERTIFICATIONS

BSc (Honours) Data Science, Level 8

National College of Ireland · 2019 to 2023

IBM Trustworthy AI and AI Ethics (2024) · IBM Python for Data Science (2024) · 16 credentials on LinkedIn

VOLUNTEERING

- **Dell Technologies**, 2022: TeckNo.dell.com content, EMEA intern onboarding panel, Transition Year Program mentor.
- **CSinc.ie, TU Dublin**, 2022: Computer Science Inclusive, improving how computer science is taught through camps, workshops and teacher CPD.
